

Grace Nippert

To Whom it May Concern,

My name is Grace, and even though I am not a New Mexico resident, I cannot sit idly while AI data centers ruin the lives of people all accross the globe. In fact, I believe it is as imporant for me to speak out for those who cannot, like the animals. This issue may not directly effect me, but humanity is effected as a whole. Data centers are hurting the earth, the place we all reside. It is crucial that we try to stop any harm possible. Data centers harm the ecosystem by createing water, air, noise, and light pollution. They also create water shortages and in a place like New Mexico, water is a resource that they cannot afford to lose this much of. We have never needed AI and we do not need it now. It is harming the environment and the education of humanity. This bubble must be popped, and we need to work together to do that.
