

Kayla Wynn

The concept of a data center large enough to cause a climate disaster is alarming, but the fact that it's actively being developed is disgusting. We as a society have NEVER needed generative AI, and yet greedy corporations are scrambling to create and build as much data centers as possible. We know these corporations and their CEOs don't care about the damage they cause, because they won't be around to see the entire earth collapse. But we as the people will. STOP PROJECT JUPITER NOW. BLOOM ENERGY IS A DANGEROUS COMPANY. DENY THE PERMIT.
