

River Nunez

"The proposition of thousands of jobs being provided with Project Jupiter and recycled water for AI search engines is built on a false promise to have New Mexicans side with the continuation of this data center. Many New Mexicans truly disapprove of this center being built and we can all collectively agree we would rather our lands that our wildlife depends on should stay untouched. This center will truly harm SO MANY communities in an already at risk state. We truly do not have the resources to deal with more water restrictions in this drought or for our electric bills to skyrocket when our job market in NM is also scarce. Do not continue to hurt our communities. Please stop Project Jupiter and protect NM land!!"
