

Brynn Guillot

I am a young person aware of ai and its impacts, and from what i know, ai will destroy my future, and many other young people's futures. entry level jobs are taken by ai, lowering the chances for people to get into the workforce and gain experience. ai data centers are making people living around them sick from the noise pollution and the pollution of the water. ai steals from artists who haven't consented for their artistic work to be used in ai data training. ai has made people dependent and addicted to the technology, making people fall behind in school, work if tasked to not use ai. and finally, but not the last point in this overall discussion, there has been many cases of ai generated CSAM being created. my ask, is to reconsider, use this space to improve the environment. thank you for your time in reading this.
