

DAVID SUAREZ

As of today, June 1st, 2026, AI is constantly proving itself wrong. The heads of all these artificial intelligence companies give us fake promises of AI helping us throughout our lives, but so far it has only made everything worse. All of these centers are taking our already short supply of water to cool their data centers, and leaving the rest of the world without anything. Please, help your community by stopping this project, so that the generations ahead of us can still see the water that runs through our country.
