

Arturo Colmenarez

I propose that a moratorium be placed on the construction of this data center until a full environmental review is completed by an independent reputable agency and a public hearing is held regarding the findings. The potential devastating and detrimental impact to our natural communities is of great concern. The size and scope of this project remains unqualified as necessary for growth and has far reaching consequences for the environment, economy and value of the area impacted. Do not move forward with the approval of this application. Thank you.
