

Linda Hall

The public that this project will affect, was never given the opportunity to know in advance what this project is and how it will affect our community and the resources that it is going to take away from the people who live here.

There should be at least a 60 day moratorium on any building or developing of this property until there is sufficient investigation by city council, by county commission, and by the people who live in this area. The city Council and the county commission should NOT move forward with any voting on this project or construction in this area without proper presentation to the people who live here and the time and consideration of the public, including a public vote on whether this project should move forward or be canceled completely.

Although AI, and all it stands for presents some advancements in all sectors, there are many drawbacks. The use of public water and electricity without public representation and opinion being even considered is a travesty of justice and there seems to be some collusion and payoffs taking place behind closed doors, that are profit for the few and the people in our area will pay the price in so many ways.

The representatives who were elected to reflect the needs of their constituents, have not taken into account those needs, nor given the public the opportunity to study and understand all the ramifications building these centers in our area will mean.

I believe it is time to let the people speak and perhaps a change in our representation is due.
