

Tsuga OCeirin

Hello, I'm writing to urge you to DENY this fuel cell air quality permit for Yucca Growth Infrastructure. Such a large data center threatens our water supply and air quality, plus would produce more GHG emissions than Las Cruces, Albuquerque and Santa Fe combined. I respectfully ask you to deny this permit to protect our right to life and to ensure the future of our children who will bear the brunt of irresponsible energy and water usage unless we do something about it right now. No new data centers in New Mexico, especially none so large as Project Jupiter.

I ask that you give the public an extra 60 days to review and comment on this project since it would have catastrophic impacts on our lives if it moves forward.

I further ask for you to hold a public hearing so that the public can be better informed about this project since it has not been well publicized in our media. This is a basic proceedings that need to be adhered to in a democratic society.

I hope you will stand on the right side of history and deny a permit to Project Jupiter. We are sick and tired of seeing our land and water parceled off to the highest bidders without any regard to the environment or people who live close by. It behooves you as the New Mexico Department of the Environment to live up to your name and defend our environment for the sake of humanity and the natural world. As we're seeing record high temperatures that are literally killing people in the U.S. and Europe, we need to take a serious look at our emissions and eliminate unnecessary sources of pollution, such as Project Jupiter and other AI data centers. It is our nation's 250th celebration of independence, let's declare independence from fossil fuels and AI data centers. I support Alexandria Ocasio-Cortez as she introduces legislature to ban new data centers, do you?
