

Lynea Watson

The increase amount of Data centers is going to create multiple problems such as ; technical issues with air pollution estimates, health impacts of air pollution & hazardous waste. The world is bad as it is with everything. Building a data center on a reservation where it is very scarce on food, electricity and health. Building a Data center there is only disrespectful to the community who reside there. For the sake of the people , animals ,wildlife, air pollution, every single thing that has life, don't build it.
