Trusting an AI data Centre to not cause much damage is like leaving your property in the Hands of a well known thief. Project Jupiter is going to cause severe damage which will take generations to fix. Abstain from going for it at all costs because it will not help us or our future generations. AI itself is not a good thing. It takes people's jobs away, it destroys creativity in people, and it tones people to become lazy and lazier because as we speak now, several people don't Like Reading paragraphs, the rate of literacy is decreasing in people and that is NOT a good thing. I understand that there are people who learn slowly and there's no one there to help them learn, so they Resort to ai. But they do this for the sake of not being Left behind and not for things which don't benefit them in any way. Project Jupiter and all other AI data projects are not here to „help the people," but they are here to fund the rich—they need to be richer than they already are and the only way to do that is bring useless creations that the public can live without, but force them onto the public. I personally think that Project Jupiter should not be funded and let the rich deal with rejection. This is the ONLY Home we have, the only Place where human life can be sustained—destroying it will lead us to our early graves. Data centres are not the only ones to blame for this of course, but they are one of the causes for it. We are losing ecosystems, Habitats, and most of all, biodiversity, all for the sake of something that people can do without. The damages These data centres cause can and at one Point WILL be irreversible. So I(as myself) plead that this project does not commence.
