

Jasmine Casas Flores

My name is Jasmine Casas Flores and I do not support Project Jupiter. I was approached by teenagers in a Smiths parking lot and was told my email would be used to send more information about the project itself. I never agreed to submit a comment in support of the project nor did I state I agreed with it. There is a massive water crisis in New Mexico that is expected to worsen within the next 25 years. Permitting a Data Center to tap into the little water we have, will be detrimental for everyone in New Mexico. I also have concerns of our electric grid not being able to sustain a project like a data center. I worry about the prices of electricity and water quality for the surrounding communities. I do believe that regardless of how the project plans to power their data center, it will have a negative impact on those communities.

I do not believe they are using ethical methods to attain their support for their air permit. For these reasons, I urge the New Mexico Environment Department to decline this project.
