

Lauren Harteg

Hi, I know I am young, but even I see the problem that this data center will create. Climate change has been accelerated and worsening every year, we do not need something that will make it accelerate faster. I want my children and my children's children to have a safe planet to live on, I want them to have Earth, but due to projects like this seems less and less likely every year. Project Jupiter and projects similar are destroying the Earth when we should be trying to fix what we have already broken. Instead of investing in data centers, we should be investing in electric vehicles, renewable energy, and a greener community. I know that won't give you money in your pocket but it will give us all the security to live on the planet we desperately want to protect, which is worth more than anything money can buy. Consider the numbers and damage Project Jupiter will cause. Consider all the voices that are speaking up about this. Consider the environment and planet you are going to destroy. At least consider your children, and the kind of planet you are forcing upon them. Thank you.
