No Data Centers in NM. Rural does not mean abandoned or useless, New Mexico's beauty comes from the least industrialization. Our mountains, sky, land, and air will not look and/or be the same when the WASTE generated from the Data Centers. Where are they going to get the water to cool the largest data center? In a state that's in a drought every 3 years. No matter what generates the power. Turbines, solar, nuclear, gas, or wind. It still produces waste! Yes wind and solar are the least. That should not DISMISS the fact it's harmful. No need to specify who or what it's harmful to because it's harmful to everyone and everything. Then down the road we're going to be faced the impacts from the data. WE the people that live here and call this beautiful state home. NO DATA CENTERS IN NM!
