Dear NMED staff, I urge the NMED to outright reject YUCCA Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid. I ask the department to please hold a bilingual public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology. I do believe this project will not have any sort of positive impact on the climate as the state it is already in right now. It is clear to me that this project would only release toxic pollutants into our water that we depend on in daily day-to-day life. It would still produce a high level of greenhouse gas and toxic pollutants into our atmosphere as well. What about the communities in that area where you plan on making this take place? Will they have fresh air to breathe? Will the temperatures outside be manageable for them without heat being so high from how much carbon dioxide this will put out? I urge this not to take place and i urge you guys to hear the voices who care about climate change and our earth as much as i do. I am writing this and submitting this comment to urge the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County. Please care about the community voices as it is not welcomed into their home. Sincerely, Anonymous
