Your decisions will have consequences. If you people think data centers and AI will help the world then it's the most selfish and dumbest thing I've ever heard. This affects all the life on earth. What we really need is water, ecosystems, diversity, harmony and art. Humans need creativity to thrive. Ai cannot create. AI is not capable of carrying life within itself, let alone creating it. It is soulless. You're only exploiting nature. technology can work with nature. There is always an option.
