On the year that we are going to experience a Super El Niño, where 1300 people died just in Europe due to the heat, where climate disasters are intensifying, I got to know that there will be a data center that will aggravate everything. Instead of investing in stuff that is destroying our planet, why not on the space data-center? You'd have way less consumption of resources to keep the data centers cool, since they are in space, and you'd stop damaging our environment so much.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
