

Geneva Poteet

I am vehemently opposed to project jupiter, as are most of the people I personally have communicated with about this. We live in a desert where many people are already struggling to access potable water, this project proposes HUNDREDS OF THOUSANDS of water gallons being used A DAY. Water should be for the people and the environment, not greedy corporate data centers who are using their technology to oppress us further. Furthermore, this entire campaign has been RIDDLED with illegalities including lack of transparency to the public, astro-turfing, incomplete procedural paperwork, indications of fraud and forgery because comments are being submitted en masse in support of this project using people's names who expressed that they are not in favor of this project. This deserves a proper investigation, not special treatment to cram it through despite the objections of the people that live here.

The people and environment in New Mexico DESERVES to be protected from corporate interests who aren't interested at all in benefiting the community. What the hell does money and jobs do if we can't drink water?? If our soil is too polluted to give us clean food, if the air becomes unbreathable, if the UV threshold becomes so unbearable from pollution that we cannot go outside anymore?!?
