

Michelle Valdovinos

I submit this comment in opposition to Air Quality Construction Permit Application 10883 proposed by Yucca Growth Infrastructure (YGI) in southern Doña Ana County. This application is based on technology that has never been deployed at the scale proposed and includes projected pollution totals based on inadequate emissions testing procedures that cannot be relied on for factual results and it proposes a design that does not provide avenues for verifiable and accurate emissions testing and enforcement. In addition, the amount of jobs claiming to be provided to the community is a gross exaggeration as many of these jobs will be given to those currently living outside of the county and state. I urge you as a citizen that cares deeply for this county, this state, and its limited resources, we don't need this mega-corporation polluting our air & water.
