We do not want Project Jupiter here in New Mexico. No matter how it is powered, our water and air is too precious for a data center to be allowed in this state. We have seen time and time again that the builders and owners of data centers overuse water and blatantly deny the environmental impact caused. New Mexico is too wonderful a place to allow for these methane fuel cells to be tested, have them test them in their own backyards and let their families breathe the proposed pollutants.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied given Bloom Energy's history of illegal dumping hazardous waste.

If the permit is not denied, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.

Approving this permit would be government-sponsored environmental racism as residents of Doña Ana County are already disproportionately impacted by environmental pollution.
