

Taylor Conlin

I am against a.i. data centers and the tactics used by Yucca and Open AI.

Look at these comments mass submitted with the exact same statements and tell me they do not have malicious intent. Listen to the residents who show up in person and express how much this would negatively affect them in the day to day instead of the paid for mass comments on this forum. It is clear that open ai is paying to muddy the waters and how they are handling this is how they will treat New Mexican residents in the future. Speaking over them, speaking for them and lying to line their own pockets.

AI Data Centers ruin neighborhoods. They cause noise disruptions, drain power, water and resources, and increase temperatures. New Mexico struggles with drought and record high temperatures. So why would we want to cause more problems just for data storage. You can't drink data, you can't eat data, you can't survive on data. Say no to AI Data Centers, For New Mexican's and for the Land of Enchantment.

If the NMED actually reads these comments, consider the sources. The duplicate comments are clearly bought and paid for by Project Jupiter and should be considered null and clear manipulation tactics by a massive corporation seeking to exploit the New Mexican people and our resources. The comments submitted by actual residents are by in large against this and future data centers in the state. Listen to the people who live here, not to the corporation only seeking a profit.

Thank you for your time.
