The environmental impact of Project Jupiter would be devastating to the communities of New Mexico and the ecosystem. As we know, it'll release 10 million tons of greenhouse gases. Additionally, fuel cell technology has never been deployed at this large of a scale. Which ONE THOUSAND times larger. And the hazardous waste that fuel cells generate like sulfur contaminants? Bloom has already been fined for before, so why should we trust that they'll handle waste properly now? - NMED should give the public 60 days of additional time to review and comment on the Application to ensure everyone can meaningfully comment and participate. Sincerely, Anonymous.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
