

Walker Laughlin

I urge the Department to REJECT Yucca Growth Infrastructure's permit applications for the YGI Microgrid. The two permit applications must be aggregated under the EPA's three-part test (same site, same ownership, same SIC code). The permit-splitting is an illegal evasion of Title V requirements. Combined NOx emissions (~499 tons/year) exceed the Title V major source threshold. Furthermore, the 50× water discrepancy (1M gal/day vs. stated 20,000 gal/day) must be addressed in the air permit record.
