The future is in OUR hands and WE are ruining it, were ruining our future and everyone else to come, project Jupiter will effect us, releasing fuel cells into the atmosphere or wasting tons of water on a data centre we do NOT need, In Morgan county Georgia people do not have clean drinking water. Is that what you want? For people, innocent people to not have drinking water because of data centres they didn't ask for? To be punished on behalf of "let's build a data centre." no. We are ruining our future and killing our planet. "For years, Doña Ana County has been called a 'nonattainment' zone— this means the air quality does not meet federal government rules." We want people to have clean water and clean air to breathe, on the planet we live on, we shouldn't be worried about the air and water being dirty or not being able to access a clean version of it, put yourself in the position of a family, maybe a young child or an elderly person with no clean drinking water or contaminated airs, it's not fair. It's cruel. We're killing our planet and ourselves while we're at it, future generations were destroying it for them, people can't afford clean water in places because of this. Stop project Jupiter. Stop denying our planet is dying.
