

Sam Bradley

This is downright ridiculous. Ai data centers are taking over the world and destroying so many natural resources and polluting the air with emissions and noise. I do not stand with project Jupiter whatsoever and will help with any action aimed towards opposing it. The public need an additional 60 days to review and comment, there needs to be a public forum hosting both English and Spanish speakers, and the air permit needs to be denied. You already know the Dono Ana county is suffering from environmental damage so this will be taken as environmental racism. Beyond disturbing and dystopian that any of these words need to be displayed to those who have more power to control this unholy level of greed.
