

Tessa Rodriguez

I think that this is an unnecessary and unethical advancement and many people agree with me I do not support the fact of this happening. If you decide to have AI data centers that release things into our atmosphere, carbon dioxide, which we know is a green house gas that traps the heat that we need to escape our atmosphere why not find a better solution to help you with your system than destroying our earth with it. This is the only planet we have that we live on and the more you harm it the faster it dies. This center is not good for the environment and we deserve to keep our beautiful green and blue earth the way it is instead of destroying it bit by bit for human consumption. We people have enough and more of whatever we need, we go above and beyond our needs which leave our earth to provide for those needs and wants. Because unlike animals the purest who's minds haven't become consumer driven like us only take what they need and if they have more than what they need they leave it to share which is not what us people do. Maybe we donate once a while and we try to give back. But giving back to the earth is the most important and taking care of it. And your part in that is to consider my opinion on this and the many others who don't want to speak up but have this feeling inside their heart that they want to help. And this data center is not the right move to a cleaner healthier earth and progressing a device that humans use does not develop us. I believe it even degrades us into not finding out ourselves and learning. Kids depend on ai for school and in which they in turn learn nothing useful and focus their time on all the bad things that they don't need to be doing. There are so many reasons to not build this but let's focus on our earth and keeping it safe and I hope you have something in whoever is reading this heart to help our earth actually become a better place and help the people and animal who inhabit this earth to live long and prosper.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
