

Leo Carmichael

My name is Leo from the UK, and I have been aware and strongly against the usage of generative ai for a long time. The data centres use and destroy billions of gallons of drinking water to cool every year, reducing the water that humans and animals alike can access, which is already declining. They are also contributing to the warming of the planet with the carbon that they use. The impact on the climate alone is enough to be against Project Jupiter but generative ai also comes with its social injustices. Generative AI steals data and steals art to produce its prompts, this reduces jobs in many industries and invades the privacy of millions, if not, more. AI has been responsible for the increase in child porn, including the recent Grok AI scandal with Elon Musk's "X". I ask that: The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably. The air quality permit application should be denied given Bloom Energy's history of illegal dumping hazardous waste. If the permit is not denied, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually. Approving this permit would be government-sponsored environmental racism as residents of Doña Ana County are already disproportionately impacted by environmental pollution. For years, Doña Ana County has been called a 'nonattainment' zone— this means our air quality does not meet federal government rules Not comply with the environmental and social impacts that generative AI is involved in. Please consider this as you will be held responsible for what AI does to this world. Thank you for reading.
