

Martin Rivas

As a proud member of Carpenters Local 1319, I am writing in strong support of Project Jupiter.

The successful construction of Project Jupiter will demonstrate that our local workforce can deliver innovative and complex facilities, paving the way for other similar projects across the region.

Securing this pipeline of future work means that local union members like me won't just have a single job, but a lifelong career. It ensures we can continue to support our families, build a stable future, and earn a good living right here at home for years to come. This is incredibly important for New Mexico in establishing our state as a premier hub for major industries, driving sustained economic growth and keeping our tax dollars working locally to fund schools, infrastructure upgrades and emergency services.

I urge NMED to approve the air quality permit and support this project so we can get to work building a stronger, more prosperous future for New Mexico.

Sincerely,

Martin Rivas, Member, Carpenters Local 1319, Albuquerque, New Mexico
