

Gloria L Hacker

I am very concerned about Project Jupiter's proposal to use fuel cells for its generative power. I am concerned about the environmental effects of the emissions released, methane gas, & CO₂, gases contributing to global warming & climate change, at a time when we should be curtailing our dependence on energy derived from extractive industries. We the people are concerned about the quality of the air we breath. Please do not issue this air quality permit. There are too many questions that remain unanswered. There are many types of fuel cells & the type that they propose to use can make all the difference as to how effective they are in powering this giant facility & at what cost to our health & to the health of the environment.
