Data centers such as these are the main contributors to the active degradation of our society and planet. They single handedly deprive communities of clean water and air, for a product that is completely inessential for every aspect of life. The only net positive of these data centers is lining the pockets of one or two CEOs, at the cost of the livelihoods of thousands. These data centers do not only negatively effect their immediate area, the consequences are felt across the world, through climate change and the degradation of many people's mental health. Any sensible global citizen would realize this and do everything in their power to stop the greedy, inhumane shills who still try to justify these senseless monstrosities.

"The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually."
