

Solomon Sledge

Who will benefit from the jobs they say this will bring when oracle wants ai to replace them all? This data center is projected to provide jobs. This data center is projected to kill our earth slightly slower than originally. Who will benefit when the land is trodden and sterile, the air and sun deadly, no peace or quiet to be had from the droning of machines powering computers that could log our every move. Machines built to ruin our world, an antithesis to all the life it infects.

I am Solomon Sledge, a temp worker paid by Albuquerque Community Canvassing, which was given money by Oracle to lie to my neighbors, to twist words and force people to be against their lives.

Do not let this data center exist.

I resent all that the center stands for, and all that the companies that hired me does.

Sincerely,
Solomon Sledge
