

Norah Solorzano

I am a Nee Mexico resident and am very concerned about the environmental impact of project Jupiter. The cons and costs of this undertaking seem to heavily outweigh anything that could be gained for the community. I am particularly concerned that bloom energy is being granted these permits with its abysmal history on covering up and ignoring waste and dumping issues. At the very least, bloom should not receive an air quality permit now and the public should be given additional time to review and have a voice in this permitting process.
