

Jennifer Pierce

I am opposed to this project. The air quality will be affected negatively in an area where the air quality fails to meet National air quality Standards. It would release toxic chemical pollutants and 10 million tons of carbon dioxide into our air. The greenhouse gas emissions would also have a negative effect. They would be at a scale that is a combination of our 3 largest cities in New Mexico combined. During times of drought and rising temperatures that lead to fires is that what New Mexico needs? The technology has not been proven with a project at this scale. There is no sustainable way of extraction. Finally, Bloom Energy has been fined a total of \$1.4 million dollars for illegally storing, transporting, and dumping this hazardous waste in several states AND falsifying records over many years to cover it up.
