

Kendall Boland

The fumes that will be released from project Jupiter will heat up our atmosphere to the point where it will be so hot people may die. It doesn't help that at this very moment we're going through a heat wave. Project Jupiter could wipe us out do we really want that? We've lived THOUSANDS of years without ai why do we need it now? We.dont.need.ai. We could be so much better off without all of this ai bullshit, the only ai we could use is the ai that helps teenagers or just anyone in general get through some stuff, that's the only ai we should be using, and if we need help use echoGPT and not chatGPT or just ask someone you know for help. STOP PROJECT JUPITER.
