We can live without Ai but we can't live without clean water. We are already facing record high temperatures IN THE DESERT. These centers will be a monster to keep cool in the blazing hot summers that get hotter and hotter with each passing year. We are already asked to conserve water living in the desert.

This is not environmentally conscious. What is it is, is building data centers where people have no voice and no power. If these billionaires want these data centers so badly, let them build them in their back yards or on their private islands. Look at the contamination in Hinckley CA in the 90s (and other contamination sites). These contamination plumes have only gotten bigger and they do not predict it to be cleaned up for another 50 years. The land is inhabitable. There is a similar underground plume of toxic chromium that has spread from Los Alamos National Laboratory to Pueblo de San Ildefonso land, that State Environment Department officials announced in 2025.

<https://sourcenm.com/briefs/lanl-chromium-plume-spreads-onto-san-ildefonso-pueblo-land-nmed-say>

Based on what other communities in the country are facing with these massive data centers, why would you want to usher in these detrimental problems that affect people's quality of life? Pollution and contamination. Cancer clusters. Strain on resources. Soaring costs of energy passed on to poor communities. Decreased water pressure. Noise disturbances.

New Mexicans love their green chile and pecan orchards. We can't eat money.
