

Anon Anon

ai data centers deplete so much of just fresh drinking water that data centers are so dependent upon to cool their servers. 1% of the earth's water is drinkable, and coincidentally the ai data centers use FRESH DRINKING WATER NOT SALT WATER, directly depleting the water that is already scarce, and will leave the community for dead. the land will not be habitable. not to mention, the amount of energy required, heat it produces, the emissions. it is not worth sacrificing what keeps us alive. AI is so unnecessary and we do not need more data centers.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
