

## Max Adelman

Currently I'm 16 when I grow up and be an entomologist but my dreams of working with bugs will be at risk due to these data centres every year they produce so much carbon emissions that are heating up our planet, bugs are a cold blooded species they need the heat but with the extra heat means the bug population won't be able to be kept in check that means invasive species will be able to breed more the invasive species will eat our crops and force other bugs out of their habitats. This isn't the only side effect of the data centers they use so much water and turn it into undrinkable water this water not only effects animals habits it also effects our day to day lives. When I look towards the future im no longer hopeful, im scared im scared

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
