

Matthew Dorsey

I do not believe NM has the water or clean energy resources needed to support data centers. I also do not believe that their establishment in our communities provide a positive enough economic impact with jobs to offset use of these limited resources. Projects like these are nothing more than wealth migration at the expense of the communities they are cited in. It is no mistake they are in New Mexico. It is not an "opportunity" for our state; it is an "opportunity" for Jupiter to take advantage of residents in a state poorly prepared to protect its residents' interests.
