

Santiago Camarillo

I'm writing to express my concerns about Project Jupiter. While I understand the potential for investment, I worry that its massive energy and water demands, especially for cooling, will put immense pressure on our state's already strained resources, particularly in our drought-prone region. This could lead to increased competition for water, negatively impacting our agricultural sector and local communities. The substantial power consumption could also strain our existing electrical grid and necessitate new energy infrastructure, potentially relying on more fossil fuels if we don't adequately scale up renewable sources. I'm also concerned that the construction and operation could contribute to air pollution and habitat disruption, ultimately affecting our natural environment and the quality of life for all New Mexicans.
