

Bernice Gutierrez

I register a resounding negative opinion to the Project Jupiter air permit. Air you can see is not a good thing but in Dona Ana County. Safety first should be the guiding principle especially for our children. Asthma is one of the most common chronic diseases in New Mexico. According to the NM Department of Health between 2,000 and 2017, the number of those suffering from asthma jumped 40%. Before decisions that could affect our citizens is made, a public hearing should be held in order for the public to have input as to what their wishes are.
