

Maggie McKay

The language of sustained development is nothing more than the language of sustained capitalistic growth. For Project Jupiter to freshly advocate for the idealistic nature of Doña Ana County as a data center site, historically acknowledged as a "nonattainment zone," is indicative of the power the language of sustained development has as well as the true intentions of those who wield it. Data centers are antithetical to environmental preservation, and thusly, to human flourishing. Biospheric destruction and lucrative endeavors to sponsor AI-orchestrated passivity will not save us. There can be no data centers built in Doña Ana County, encroaching upon the community, resources, and water of that land. It is a great injustice that the residents of Doña Ana County have been repeatedly disregarded. Building the largest plant that Bloom Energy has ever presumed to build next to a heavily populated area blatantly spits upon and revokes the humanity of all those in the vicinity. For the government to sponsor and approve Bloom Energy's air quality permit is to cede that the residents in Doña Ana County are less deserving of life than other human beings. To permit Project Jupiter is government funded environmental racism, a reoccurring motif in the triadic relations between AI—governments—Those They are Sworn to Protect. For New Mexico's government, selling out would not only mean selling their own souls but imagining themselves authority enough to condemn the lives of 229,000 others. Air quality and lethal emissions aside, Bloom Energy's history of illegally dumping hazardous waste, the failure of their developers to include pollution controls, and the conservative estimate that this center would consume around 1 million gallons of water daily pulverize any naive notions that this might be a good "investment" for Doña Ana County. The very real carnage Bloom Energy wrought can not hide behind the thin patina of "green," and "sustainable" growth. The residents of Doña Ana County should hold the final sway, as lives directly affected and thusly infinitely more valuable than any wealth Project Jupiter can endlessly accumulate. New Mexico's government cannot purport to care for its citizenry while entertaining Bloom Energy. To do so would be to act as executioner. Let us not pretend that the plights of nature and human beings are not inextricably intertwined. The people say NO to Project Jupiter.
