

Robertrey Jaramillo

I, Robertrey Jaramillo, am making my opinion known to denounce Project Jupiter.

The actions of this center pose a threat to the community in its usage of utilities through electrical and water. Data Centers are shown on smaller scales to rival cities in usage of electricity, which can affect local grids and not allow usage of the community's own power. The water, already seen as an excessive amount to run a building, will heavily affect all of New Mexico. The state is in constant droughts, and a data center is always running non-stop. I use to work at the Meta center, so my knowledge on non-stop operating is known for all data centers.

Another factor to take note is heavy noise pollution of the local area. Even if it's isolated, it affects all wildlife and the people around it.

This data center is unnecessary for the community, as it will push our drought further than before, and will not be accepted by our community.
