

Adam Elbeck

I am requesting that NMED deny Yucca Growth Infrastructure's air quality permit. The experimental fuel cell technology will still lead to an increase in an exorbitant amount of emissions, which is incredibly concerning as New Mexicans are experiencing firsthand the impacts of anthropogenic climate change- through drought, extreme unseasonably high temperatures, and severe and intense wildfires. The citizens of Doña Ana county have the most to lose if this project is approved due to proximity to air and noise pollution while having the least to gain- most jobs will be temporary construction jobs and those that will profit from this exploitation project, the AI millionaires and billionaires, will never have to face the consequences of drought, fires, and heat exhaustion that New Mexicans in Doña Ana county will. NMED, deny this permit. Make a decision for the health of our state's future. Follow the example set by Santa Fe's moratorium on data centers.
