

Nic Santos

Afternoon, the proposed project attempting to be completed by Yucca growth infrastructure LLC, presents not only environmental concerns and challenges but also societal concerns. To naively believe this project would benefit the state is to ignorantly ignore its current state of need. The current demographic of voters aren't afraid to vote in consideration of multiple factors and can carry their vote elsewhere where. Please carefully reconsider your position on why this infrastructure project is beneficial and if it's really environmentally sustainable.
