

Leighton Toretto

I wish to live in a world where my future kids will not have to worry about data centers taking up all of their water, I wish to live in a world where I don't have to do that. I want to see that our wildlife stays intact. I want to see that our country won't run out of clean water in the future. What these data centers do is take away clean water. It's disgusting that we take water away from living people with each data center built in a world where we only have 3% fresh water. The sheer amount of carbon released from the data center will be detrimental to our world. And my children should not be affected, develop medical issues or have to live with toxic pollution in our air and land. This is disgusting. Do better. No data center.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
