

Madeleine Garone

I am writing to urge the New Mexico Environment Department to deny Project Jupiter's permit. AI data centers pose detrimental environmental impacts to health of our communities and the land we call home. I am deeply concerned about the health repercussions that individuals and families in southern NM could face as a result of Project Jupiter, all so that out-of-state corporations can make a profit — it's egregious. The sheer amount of natural resources, like our water, to run Project Jupiter is unacceptable, and risks being contaminated for future generations. In a region already faces drought and climate change-related temperature increases, we need to defend the land and the communities who live here from seedy corporate interests.
