

Amarie Williams

I oppose the proposed AI data center because of its potential impacts on our community, including increased water and energy consumption, noise, traffic, and strain on local infrastructure. This project could permanently change the character of our neighborhood while providing limited direct benefits to residents. I urge decision-makers to prioritize the long-term health, environmental sustainability, and quality of life of our community by denying approval for this project until its impacts have been thoroughly evaluated and shown to be acceptable.
