

John Gilbert

This permit should not be granted. Recent wind rose maps indicate that Las Cruces, the city I intend to spend my life as a resident of, is downwind from Santa Teresa. I find the reporting that this campus will release up to 500 Mt of NO_x a year deeply upsetting, and the loophole that this is technically two facilities will prevent triggering more stringent air quality monitoring since each facility will emit just under the cutoff for PSD reviews.

Do not approve this permit, please.
