

Katie Hart

I am commenting in strong opposition to Project Jupiter and all data centers. We can already see the awful effects of climate change in New Mexico with hotter and more humid summers, plus higher danger of wild fires and subsequent flooding.

We cannot afford to increase our risk of air pollution, water shortages, or other destructive climate impacts, which disproportionately affect poor communities. The Rio Grande is completely dry...the effects are already devastating.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably. If you will not outright reject this project and permit, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.

Don't sell out New Mexicans for short term gains - please consider the long term negative consequences.
