Project Jupiter is a horrible idea. Even though no human person needs AI to survive, we understand that AI is already so integrated into society and it's not something that's going to leave. That being said, why are we trading the future of humanity for a lifeless entity that we are letting control us? You know about the damage project Jupiter will do, you know about the damage that AI has already done to our planet. I'm barely 17 years old and I'm about to start applying for college. Ask yourself; do you want your kids/grandkids to grow up in a hot, dry, burning world? Are you prepared to hold the fault for that? This is not something we can shrug off. Every year it gets hotter and hotter. Please, show us that there is hope in our only earth's future and deny The air quality permit.
