

Macyn Taylor

I am from Marion and I am asking that this project be denied. This project will produce too much toxic waste and harmful gases into the atmosphere. These gases could trap heat and hurt the environment and influence global warming. People will continue to suffer due to extreme heat. Besides just insane temperatures, the air quality will heavily decrease. We already have very poor air quality and this project will further lower the safety. This project will not just affect humans, but every plant and animal species across the globe. So I would like to ask that this project does not go through
